Company Overview

CineVerse is subscription-based video streaming platform offering Basic, Standard, and Premium plans. The company has observed an increase in customer cancellations, leading to revenue loss and reduced customer lifetime value.

Business Problem

CineVerse has experienced an increase in subscription cancellations over the last few quarters. Customers often cancel without providing meaningful feedback, making it difficult to identify churn drivers and implement effective retention strategies. This results in revenue loss and reduced customer lifetime value.

Business Goal

Reduce subscription cancellations by introducing a structured cancellation and retention workflow that captures feedback, offers personalized retention options, and improves customer experience.

Project Objectives

- **Capture cancellation reasons:** Understand exactly why users leave.
 - **Improve customer retention:** Present targeted alternatives to churning.
 - **Reduce churn rate:** Lower overall monthly subscriber loss.
 - **Increase customer lifetime value (LTV):** Extend the average duration of a user subscription.
 - **Provide visibility:** Give leadership data-driven insights into cancellation trends.
-

Project Scope

 In Scope

- Subscription cancellation requests
- Cancellation reason collection
- Retention offers
- Cancellation confirmation
- Feedback collection
- Retention reporting

 Out of scope

- User registration
 - Subscription purchase process
 - Payment gateway development
 - Customer support ticketing
-

Stakeholders

Stakeholder	Role
Customer	Initiates cancellation
Customer Success Team	Reviews churn reasons
Marketing Team	Creates retention offers
Product Manager	Analyses feedback
Management	Monitors retention metrics
